RocketRez

The website, audited and reimagined

November 6, 2026

The right idea, hidden.

rocketrez.com picks a fight nobody else in the category is picking: revenue, not just ticketing. Three things hold it back, in order of what they cost.

814 organic visits a month in the US. ROLLER gets 4,690.

Semrush, US database, November 6, 2026.

01 **Almost no proof where buyers decide.**
The homepage carries zero numbers. The one hard result RocketRez owns sits deep in a single case study.

02 **Search and AI answers can't find it.**
Missing from the top 10 for the category's money searches and from all six AI answers tested.

03 **Every path ends in one long form.**
No price signal, nine required fields and no way to see the product without a sales call.

What already works.

The raw material is all here. Most of the fixes are copy, structure and housekeeping, not a rebuild of the product story.

01

A point of view worth keeping

"The system of record for operators who treat per-cap like a scoreboard." No competitor names per-cap in a headline.

02

Real product, real people

Real product screens, a team of former operators customers mention unprompted, and a library of 146 posts, a podcast and an Academy.

03

Sound foundations

No missing alt text across 29 pages, no sideways scroll at 390 px, near-zero layout shift, and structured data on every page.

Where the site stands.

Positioning and messaging

Mixed

A distinctive category line that never says who it's for, what it replaces, or why to believe it.

Navigation

Weak

18 product pages grouped in ways buyers wouldn't guess, 5 dead industry links.

Conversion paths

Weak

One 9-field form for every intent, seven names for one button, no price signal.

SEO

Weak

Small footprint, inconsistent titles, 404s and test pages in the sitemap.

AI answers

Weak

Absent from every AI answer tested; good structured data undercut by conflicting facts.

Mobile

Mixed

No sideways scroll anywhere; the demo form starts 1.6 screens down.

Proof and trust

Weak

Zero homepage numbers, one hard result in 15 case studies, reviews stale since mid 2024.

Product depiction

Mixed

Real product screens, used small, repeated, and unreadable in the hero.

Visual design

Mixed

Clean and consistent; a generic template look, typos in key lines.

Content and Learn

Mixed

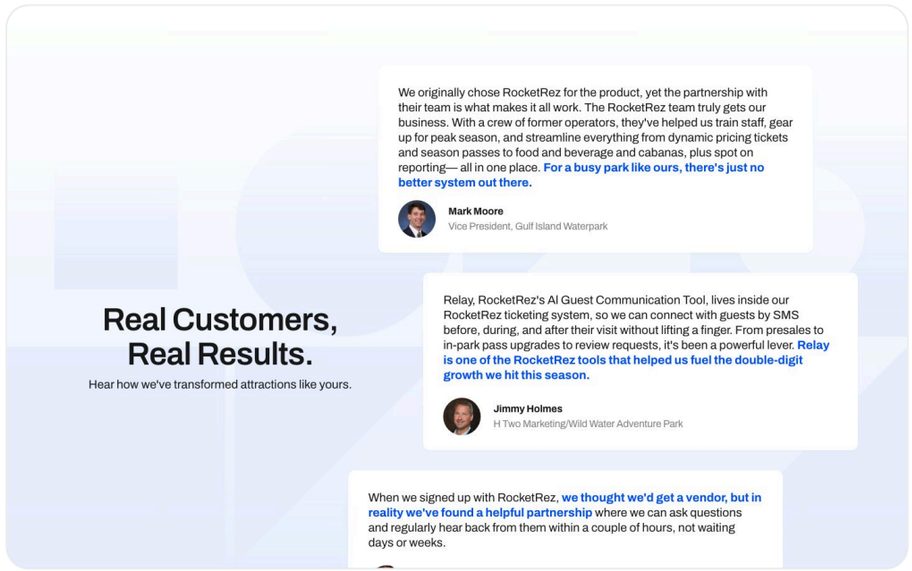

A big library with no clear home, posts competing with each other, gated definitions.

Accessibility and speed

Mixed

Alt text and layout stability are strong; 3 to 5 MB pages and low-contrast labels are not.

Proof is hard to find.

Today The homepage proof section

01

A heading with no results under it.

"Real Customers, Real Results." holds three quotes about partnership and support. One is from a marketing agency, not an operator.

02

One hard number in 15 case studies.

Fossil Rim: 65% more business with 55% less staffing, since May 2020. It never reaches the homepage.

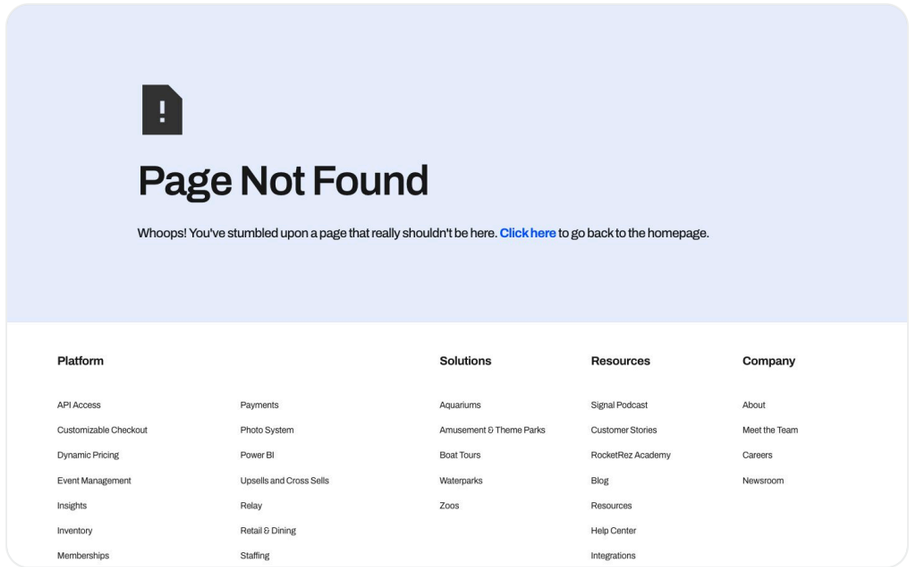

03

Reviews and security are quiet.

Capterra shows 4.4 from 22 reviews, none newer than mid 2024. There is no security page. ROLLER leads with "3,500+" in its headline.

Buyers can't find it.

RocketRez wins searches for its own name and loses the ones buyers type when they don't know it yet.

Today The Museums link in the footer

0

Of six AI answers named RocketRez.

Best zoo ticketing software, ROLLER alternatives, what is per-cap spending, and three more. The answers leaned on review sites and on comparison pages competitors wrote.

5

Footer industry links return Page Not Found.

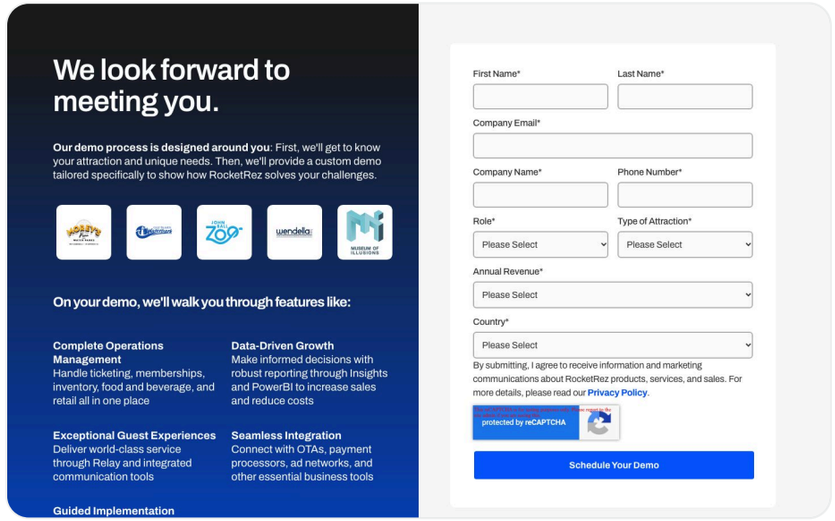

Museums, Scenic Railways, Wildlife Parks, Race Car Experiences, Towers and Observatories. "Museum ticketing software" draws 170 searches a month at a $19 cost per click.

6

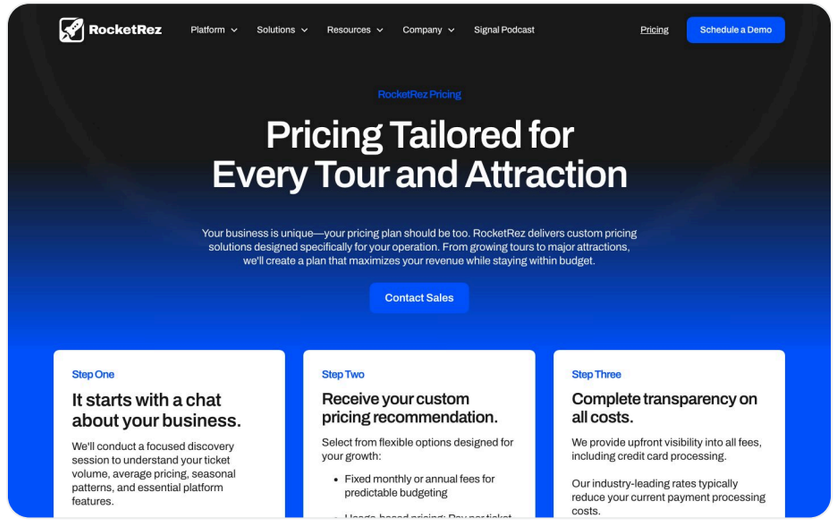

Of 11 links in llms.txt are dead.

The file written for AI engines sends them to missing pages and a boat-boarding figure that conflicts with RocketRez's own case study.

Every path ends in one long form.

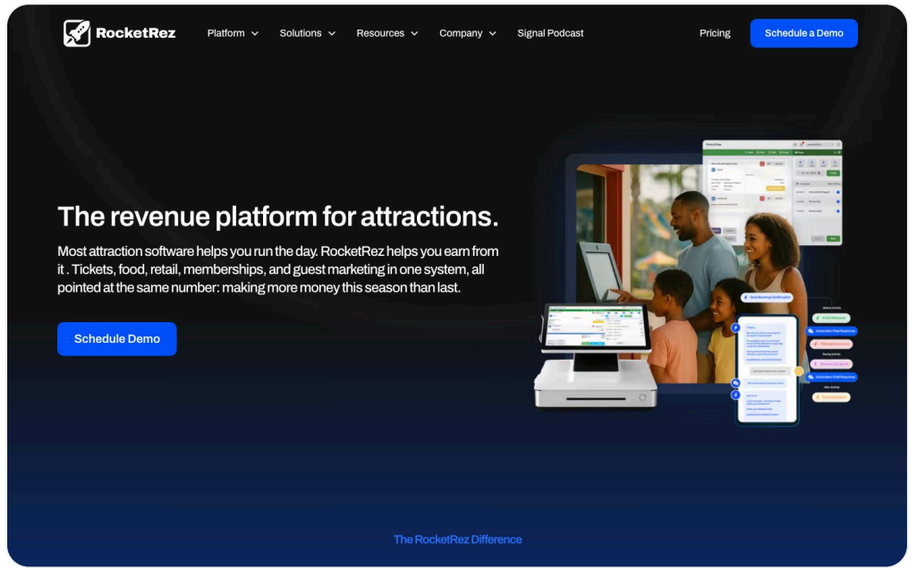

Today The same demo form sits on all 29 pages measured

Today Pricing promises "complete transparency" with no number

> **Nine required fields**, including phone and annual revenue, and an option labelled "Resort (No ICP included)", an internal note buyers can see. **Seven names for one button**, from "Schedule a Demo" to "Consult Solutions Team". And no way to see the product without talking to sales.

The best line is below the fold.

Today The homepage hero at 1440 px

01

"Per-cap like a scoreboard" is a subtitle.

RocketRez's most ownable idea is the one fewest visitors see.

02

The market is described five ways.

Mid-market tours, enterprise attractions, mid-to-large operators, $1M to $200M, $2M to $100M. A $4M zoo can't tell if it's the core customer.

03

Words every rival uses.

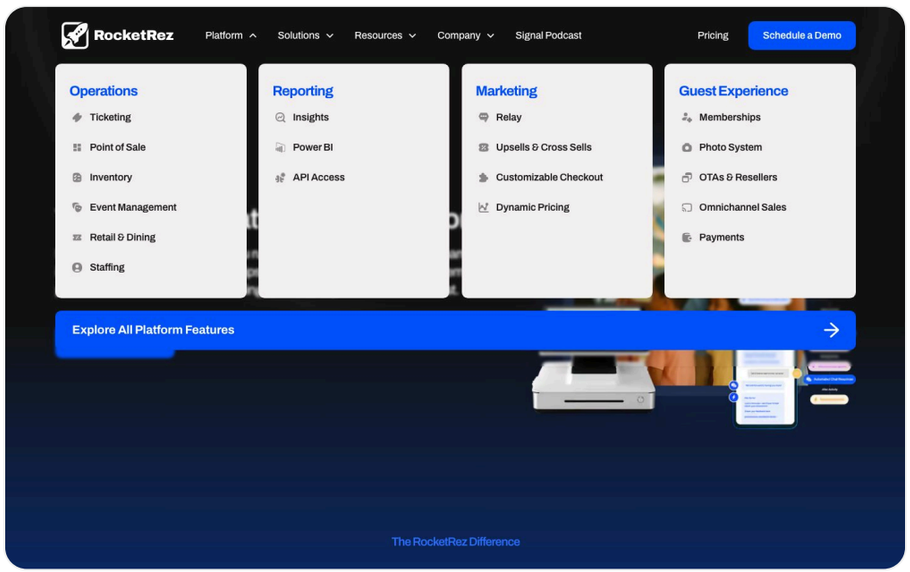

The live copy's own words, "Seamless", "world class" and "Revolutionize", appear on 204 lines. Typos sit in headline claims: "PowerBI", "AI-powered".

04

The product reads as decoration.

The hero's product cards can't be read at 1440 px or on a phone.

The housekeeping is quick.

Today Dynamic Pricing is filed under Marketing, Payments under Guest Experience

- The sitemap lists 367 URLs, including a test homepage, a 9.6 MB demo store and five account pages.
- Titles follow three patterns; descriptions run to 221 characters and get cut off in results.
- The homepage's main image paints at 4.4 s on throttled mobile, against 2.5 s for "good". Most of the 3 MB is tracking and form scripts.
- Feature labels sit at 1.54:1 contrast; WCAG 2.2 asks for 4.5:1.
- Eleven menu headings come before the page's own heading for screen reader users.
- On a phone, the demo form starts 1.6 screens down the page whose only job is the form.

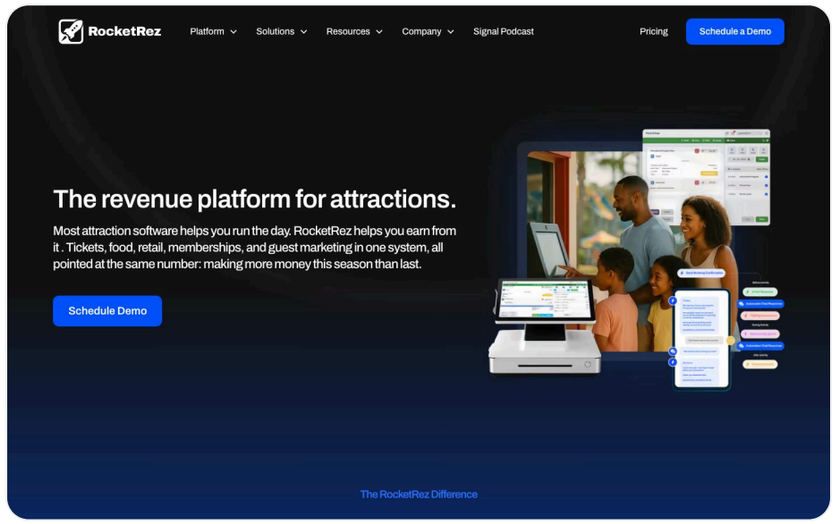

The first fixes take hours.

#	FIX	IMPACT	EFFORT
1	Fix or remove the five dead footer links and six dead llms.txt links	High	Hours
2	Put proof on the homepage: a volume number, the Fossil Rim result, a rating	High	Hours
3	Cut the demo form to what sales acts on and say what happens next	High	Hours
4	One sentence for who RocketRez serves, used everywhere	High	Hours
5	Fix the typos and retire the live site's "seamless", "world class" and "Revolutionize"	Medium	Hours
6	Clean the sitemap of test, account and tag pages	Medium	Hours
7	Retitle venue and platform pages with the searched phrase	High	Hours
8	A price signal, plus contract, renewal and data-export answers	High	Days
9	Build the Museums and Scenic Railways pages	High	Days
10	A results box on every case study	High	Days
11	A plain security and procurement page	Medium	Days
12	Regroup the Platform menu by buyer job; venue types at the top level	Medium	Days
13	Lighten the homepage: hero image first, scripts only where needed	Medium	Days
14	A fresh Capterra and G2 review drive	High	Days
15	Ungate the glossary, starting with a per-cap definition RocketRez owns	High	Weeks

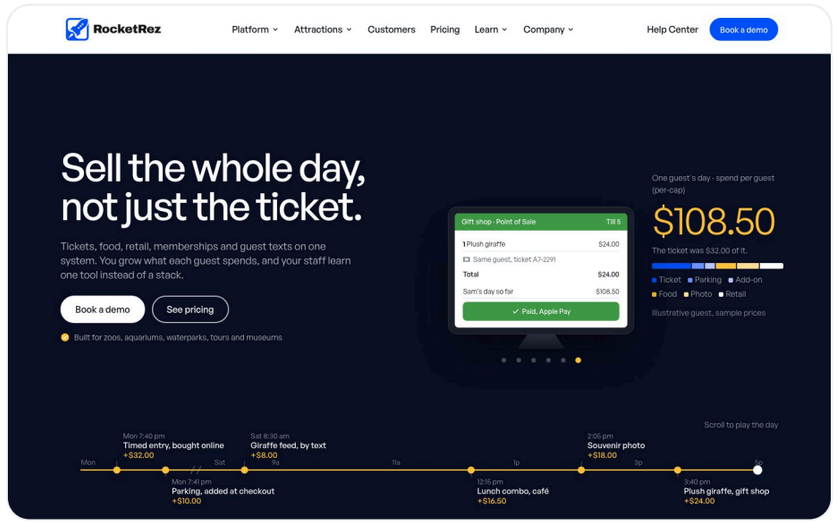

Every measurement, finding and source is in audit.md.

Sell the whole day, not just the ticket.

The concept site is built on one sentence: tickets, food, retail, memberships and guest texting on one system, so every guest's spend adds up to one number an operator can grow. That number is per-cap.

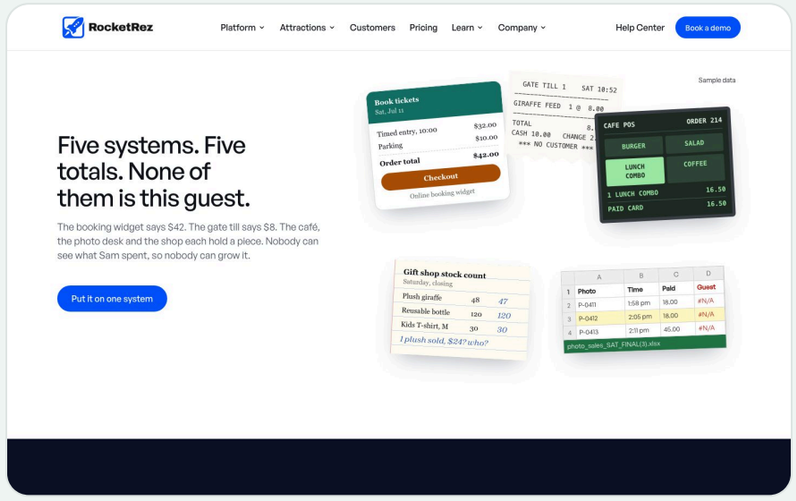

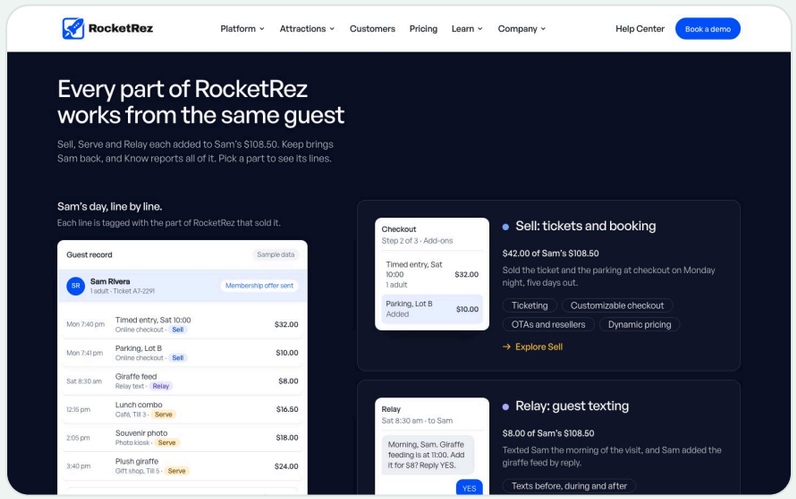

Today rocketrez.com

Concept site/index.html

Five systems, one guest.

01

Per-cap is the number the whole site points at.

Buyers already keep score this way, and one number is easier to remember than eighteen modules. One asset used consistently is what makes a brand easy to recall (Ehrenberg-Bass Institute).

02

The hero is one guest's day.

A ticket, lunch, a photo and a membership upgrade land on a timeline and the counter adds them up. About 57% of viewing time sits above the fold (NN/g).

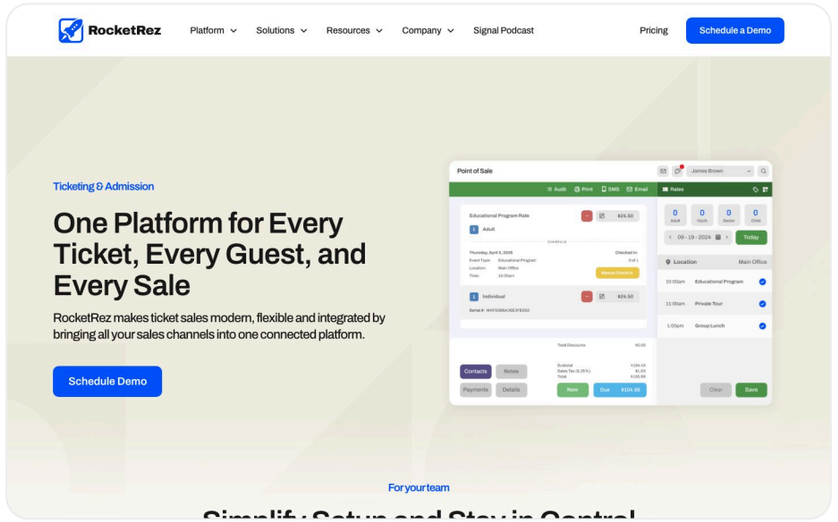

03

Five systems collapse into one record.

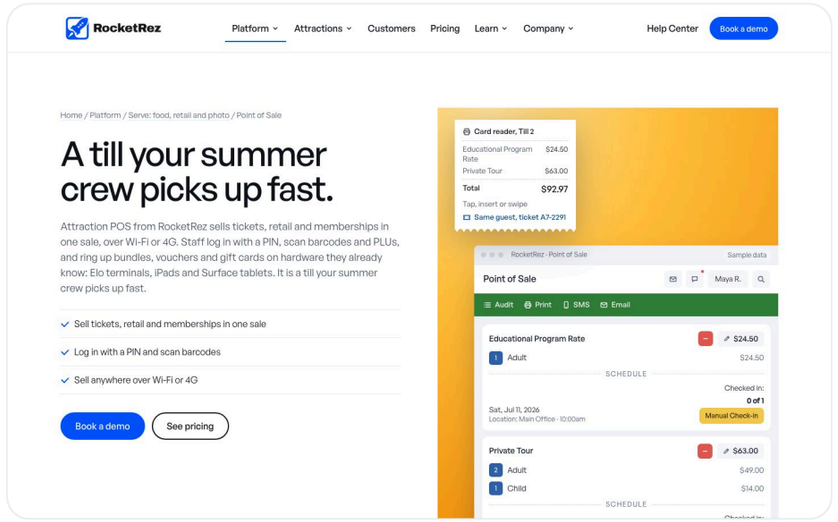

It shows buyers their own Monday morning and argues against doing nothing. Operators say it themselves: two systems were "creating chaos between our guests and our staff" (Hemker Park and Zoo).

Real screens, one point each.

Today the same point-of-sale screen appears on the homepage and the Ticketing page. The concept rebuilds each screen in HTML with sample data, so it stays sharp and can be clicked.

Today Ticketing, showing the till

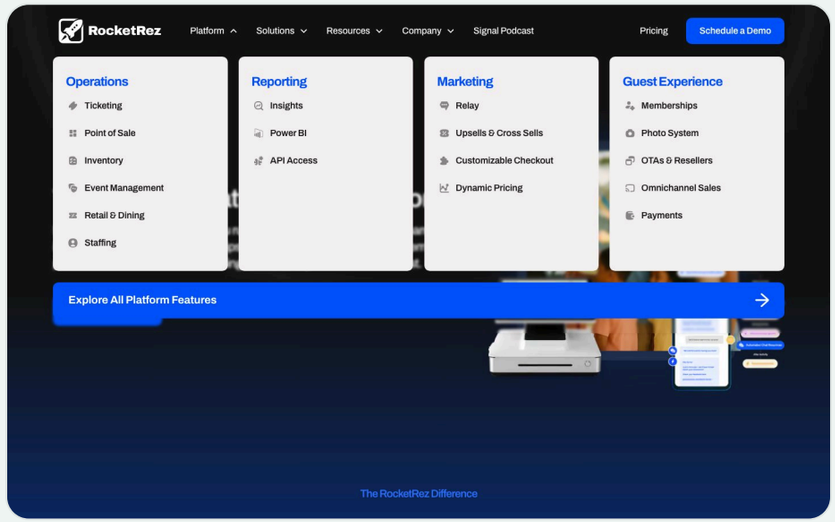

Concept Point of Sale

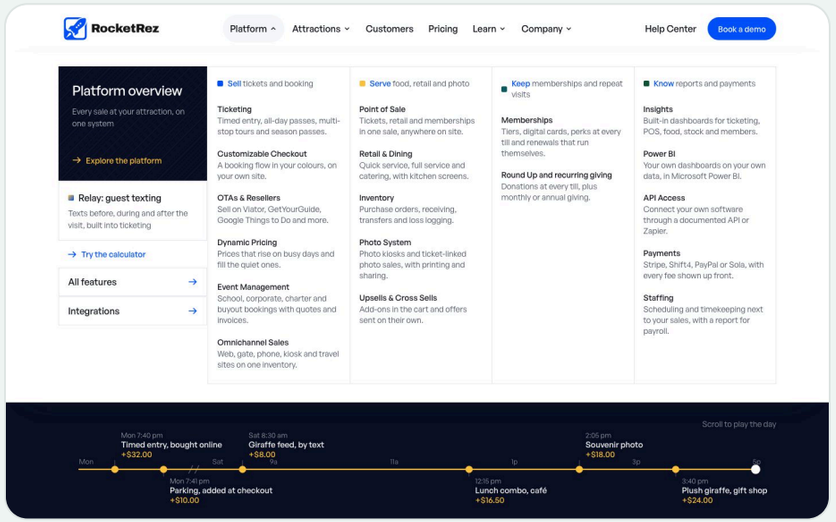

> **Decisions 4 and 5.** Let hesitant buyers see the product without a sales call, and let them learn by doing (NN/g, B2B usability; complex application design). One callout per screen and a benefit headline on every card: the main point first, the detail after (NN/g, inverted pyramid).

Grouped by the operator's job.

Eighteen module pages fold into four jobs an operator recognises, Sell, Serve, Keep and Know, with Relay guest texting as its own item.

Today Grouped by internal category

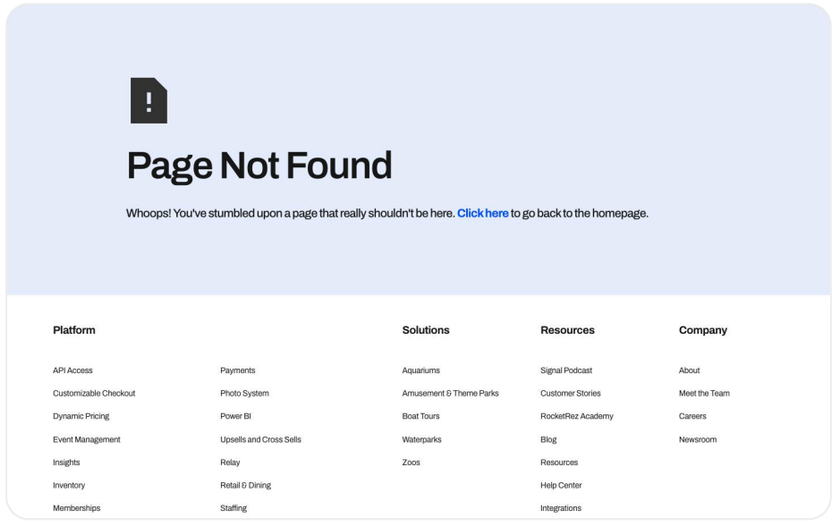

Concept Platform

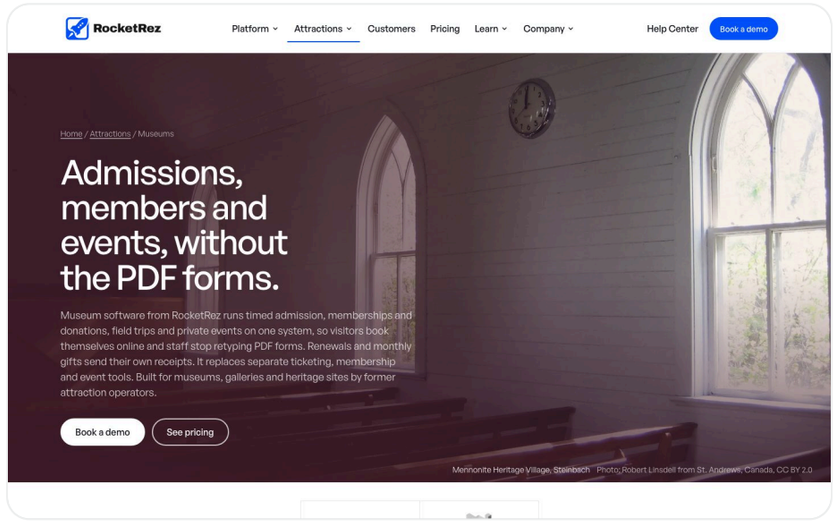

> **Decision 6.** Operators think "sell more before they arrive" and "bring them back", not "Upsells and Cross Sells". Use the user's words, not internal category names (NN/g, usability heuristic 2), and give every group a name the reader understands.

Every venue gets a page.

Each venue page opens with what that operator fights, in their terms. A zoo's problem, members at every till, is not a boat tour's, so tours get their own headline: "Fill every departure, from every channel."

Today /museums

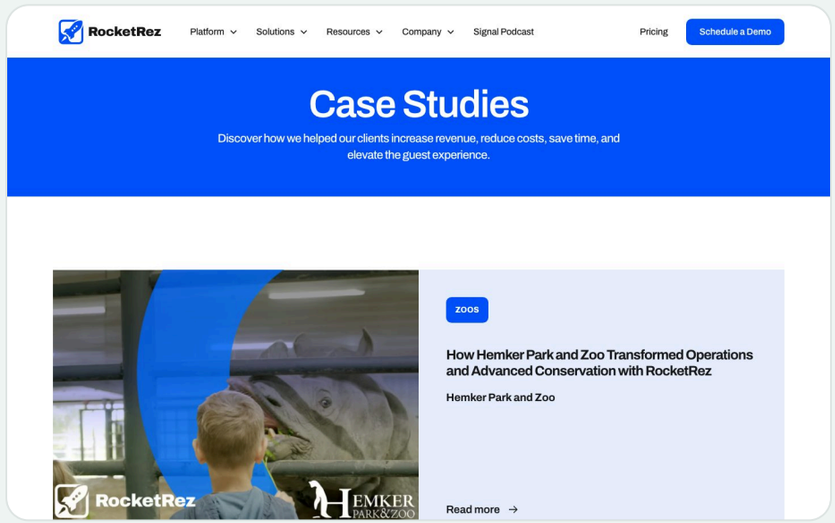

Concept Museums

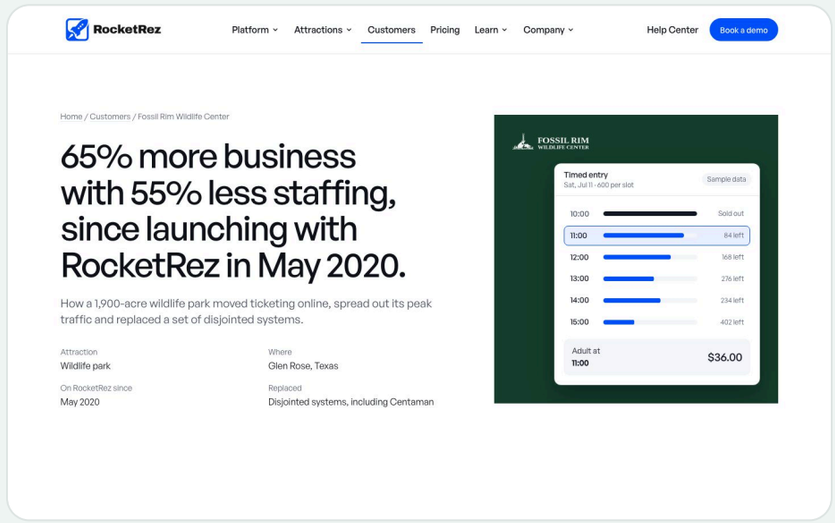

> **Decision 7.** Segment by how customers describe themselves (NN/g, B2B navigation). Buyers recall brands through their own buying situation, "software for our zoo", so each page ties RocketRez to one situation (Ehrenberg-Bass Institute).

Proof with names and dates.

Real logos, real venue photos, quotes with a name and title, and results with a date. Fossil Rim's result always carries "since its May 2020 launch".

Today Case studies without numbers

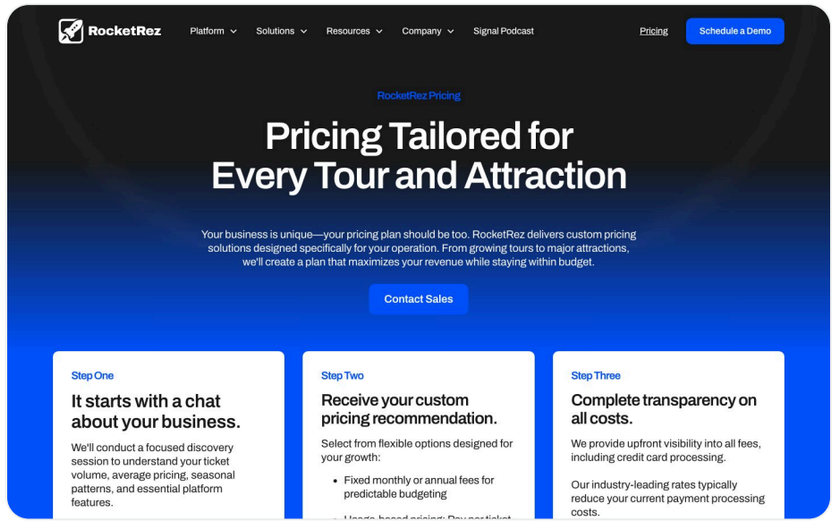

Concept Fossil Rim

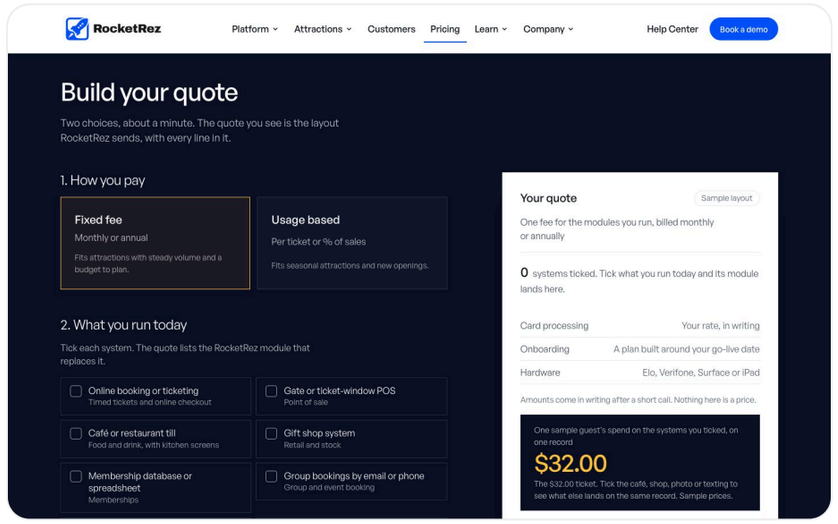

> **Decision 8.** Testimonials earn trust with the person's title and company (NN/g). Unknown brands need reassurance, and named specifics beat generic claims (Baymard Institute). An undated result invites a CFO to discount it.

Every fee, shown up front.

Pricing becomes a quote builder: two choices, about a minute, and the layout of a real quote with every fee line in it, plus the contract terms to get in writing.

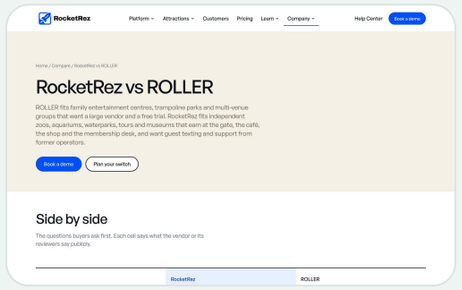

Today Contact Sales

Concept Pricing

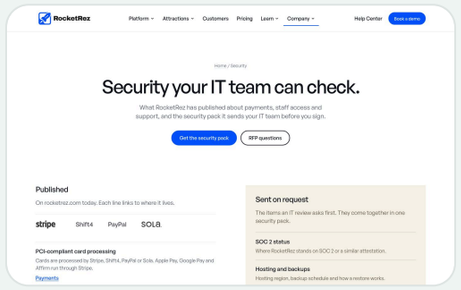

> **Decision 10.** Price is the information B2B visitors rank highest, and hiding it reads as evasive (NN/g). An honest note: NN/g also finds a starting price or range beats a calculator. The page is built to take one the day RocketRez publishes it.

Answers for the whole committee.

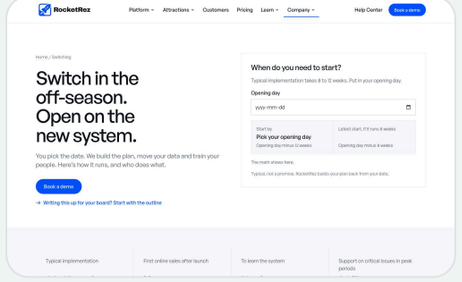

Comparisons that admit rival strengths

Dated sources, "Not stated" where the record is silent. Balanced proof beats glowing proof (NN/g).

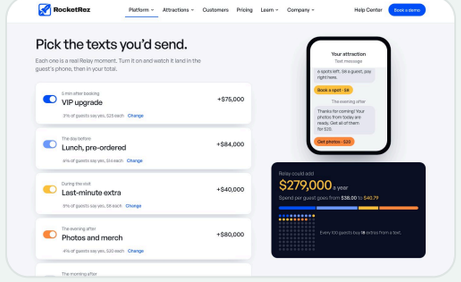

Security your IT team can check

What's published, and what's sent on request. Never a badge for something not held (Baymard).

Switching around the opening day

Enter an opening day, get a start date with the maths shown, plus an outline for the board (NN/g, B2B).

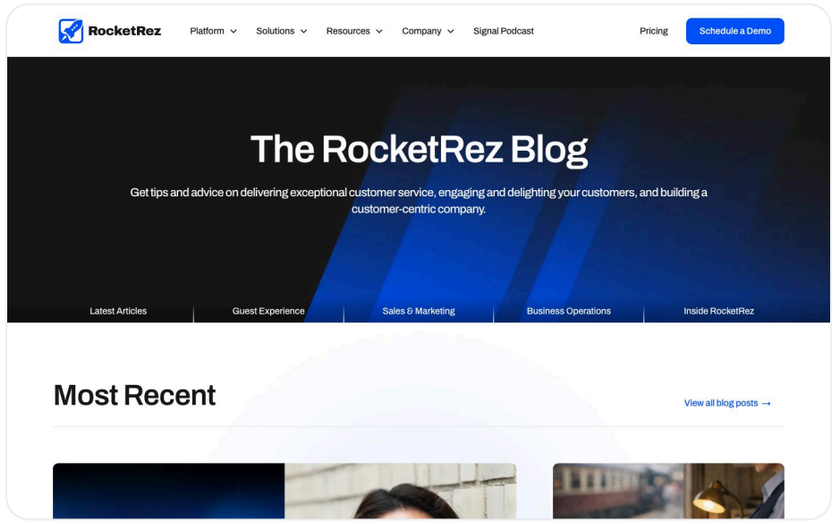

A Relay calculator with nothing hidden

Every take rate and price is editable, labelled a starting guess. A CFO trusts a model they can argue with.

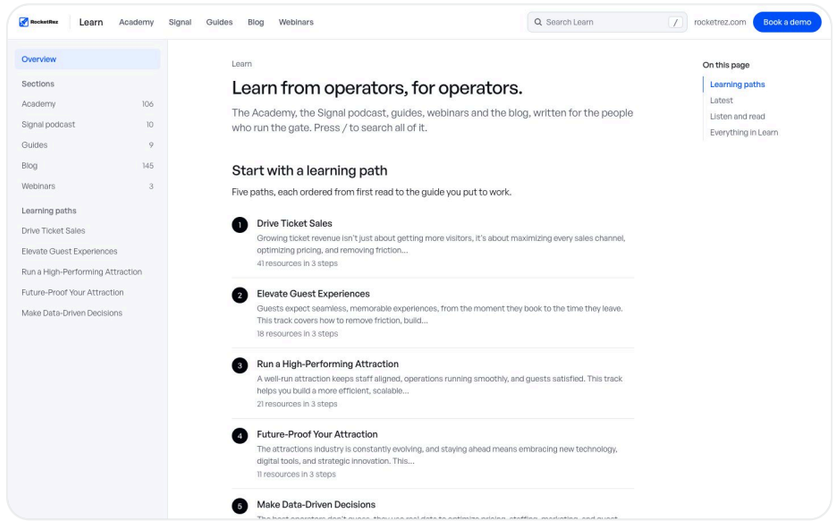

Decisions 9, 11, 12 and 13. RocketRez appeared in none of six AI answers to buyer questions, partly because only competitors had written comparison pages.

Learn, built for questions.

The Academy, the Signal podcast, guides, blog and webinars move into one searchable library of about 270 items, with nothing basic behind a form.

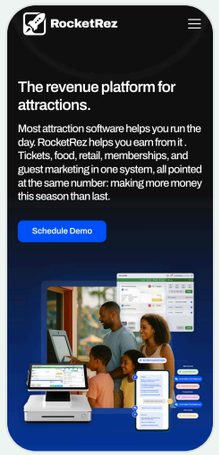

Today A blog header that could be anyone's

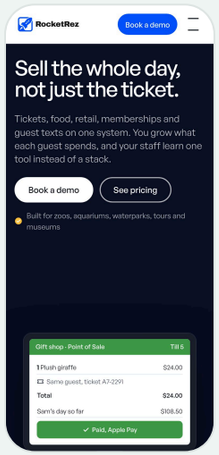

Concept Learn

> **Decisions 14 to 16.** Help should be searchable and task-focused, and how-to content shouldn't sit behind forms (NN/g). Plain operator voice, with category words such as "seamless" and "all-in-one" banned: concise, objective copy measured 124% more usable than promotional copy (NN/g).

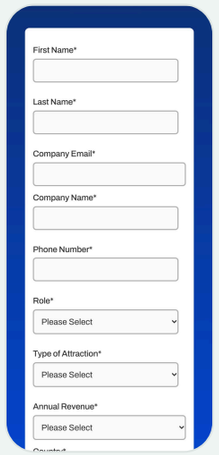

One button, down to a phone.

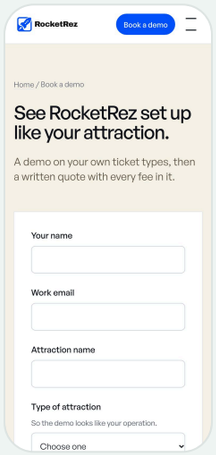

Today Home

Concept Home

Today Demo form

Concept Demo

20

"Book a demo", everywhere.

Five fields, and the form says who replies and what happens next. NN/g and Baymard both point to 3 to 5 fields.

19

WCAG 2.2 AA, down to 390 px.

4.5:1 text contrast, 24 px targets, keyboard paths, reduced motion. In the WebAIM Million 2026, 95.9% of home pages had a detectable failure.

17

Seven type sizes, ten spacing steps.

An audit script fails the build on anything off-scale. About three type sizes per view keeps emphasis meaningful (NN/g).

What we left out on purpose.

01

AI imagery

Every photo is a real customer venue from Wikimedia Commons, credited. When anyone can generate a perfect image, a real one earns trust.

02

Raster screenshots

Every product view is a working recreation of a real screen, labelled sample data.

03

Invented numbers

No customer count, uptime, per-cap lift or price RocketRez hasn't published. Where one belongs, the page is built to take it.

04

Fake urgency

No countdowns or "only 3 spots left". The only deadline is the operator's own opening day.

Claims and search. Every number traces to rocketrez.com or a named customer. The Relay growth quote is attributed to H Two Marketing, the park's agency, not the park. Titles use buyer search terms, with one heading per page and answer-first sections. All 22 decisions and their sources are in why.md.

Everything is in the repo.

It's yours to keep, use, or hand to whoever builds the next version.

Read the audit →

why.md

Why the concept works the way it does

All 22 decisions, the proof behind each, and the sources.

Read the reasoning →

What would make it real?

01 How many venues, guests or tickets can RocketRez say publicly?

02 Which founding year is right, 2011 or 2012?

03 Is the target "mid-market" or "mid-to-large"?

04 Which customers would take a reference call?

What the concept is waiting on

- Customer count and countries, and tickets or dollars processed a year
- A per-cap lift across three or more customers, with the method
- Confirmation that Insights reports spend per guest by department
- Support response median, uptime history and a status page
- Security attestations: SOC 2 status, PCI level, SSO and MFA, hosting region
- A starting price or range, and contract terms
- Confirmation of the 8 to 12 week go-live and the demo reply window
- More logo files, staff portraits, and permission for venue photos and quotes
- The guide PDFs behind the Learn forms, and a fresh round of reviews

Thanks.

If a hand would help with any of it, we'd be glad to talk.
